

**VOLTA**

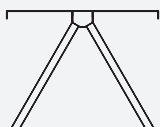

La chiave di volta è il concetto architettonico da cui prende ispirazione questo tavolo che si connota per la sua spiccata eleganza industriale. Un oggetto ambientabile in spazi diversi a seconda della particolare finitura, in acciaio naturale con smalto trasparente o in colori verniciati per esaltare il contrasto tra legno e metallo.

Il piano è costituito da una lastra d'acciaio e un'anima in legno. Fissando i due elementi metallici a quello centrale in legno, come nella chiave di volta, si raggiunge l'equilibrio tra leggerezza e solidità della struttura.

*This table is characterized by a soft sense of industrial elegance and is suitable for use in different contexts according to specific finish, in natural steel with transparent coating or powder-painted to exalt the contrast between wood and metal. The top is composed of a steel plate and a wooden central core. By fixing the two metallic elements to the central wooden part, the entire structure is kept stable and in place, just like it happened with ancient vaults in architecture.*
